New Feature   Enhancement/Upgrade   Fix

10521   All tools have been updated to use **Java 1.8.0_60** to keep up with the latest Java enhancements, including security improvements. Java Runtime is bundled with the installer.

10723   Improved transcript display by removing the overlay message indicating that real-time updates are disabled. When real-time updates are disabled, the user interface will display the option in red text.

Release Date: 09 September 2015

Release Summary

In this release of the RadBlue Analysis Suite, we made the following improvements:

- **Upgraded to G2S 3.0** – The RAS now uses a backwards compatible G2S 3.0 schema by default. We've done extensive testing to ensure that the tool continues to work with all G2S implementations, but please let us know if you encounter any issues and we'll get them resolved without delay.

- **Added Transcript support for the Employee and dft Classes** – The Transcript in the RAS now supports all commands in the employee and dft classes. The best view of the employee session meter deltas can be found in the `employeeSessionEnd` command view.

We hope you enjoy this new release. If you have any ideas for improvement that we may have missed, just let us know via support@radblue.com.

Release Date: 03 June 2015

Release Summary

In this release of the RadBlue Analysis Suite, we made the following improvements:

- **Updated our tools to use Java 1.7.0_76** – To keep reasonably close to the leading edge of Java development, we've moved our tools to version 1.7.0_76 of Java (we're not quite ready to make the leap to Java 8). This way, we take advantage of functional and security improvements that are made in the latest versions.

- **Java installer is now bundled with the RadBlue tool installer** – The installer for the requisite version of Java is now included with the RadBlue tool installer. This makes the RadBlue installer a bit larger, but should delight those who are installing on computers that are not connected to the public Internet.

We hope you enjoy this new release. If you have any ideas for improvement that we may have missed, just let us know via support@radblue.com.

Release Date: 11 March 2015

Release Summary

For this release, there weren't any requested features to implement or bugs to fix. However, we are now distributing a 64-bit version of the RAS to improve processing of large debug files.

NOTE: To use the 64 bit version of RAS, you must be running a 64-bit version of windows.

We hope you enjoy this new release. If you have any ideas for improvement that we may have missed, just let us know at support@radblue.com.
