

Release Date: 07 December 2015

New Feature

Enhancement/Upgrade

Fix

10521 All tools have been updated to use **Java 1.8.0_60** to keep up with the latest Java enhancements, including security improvements. Java Runtime is bundled with the installer.

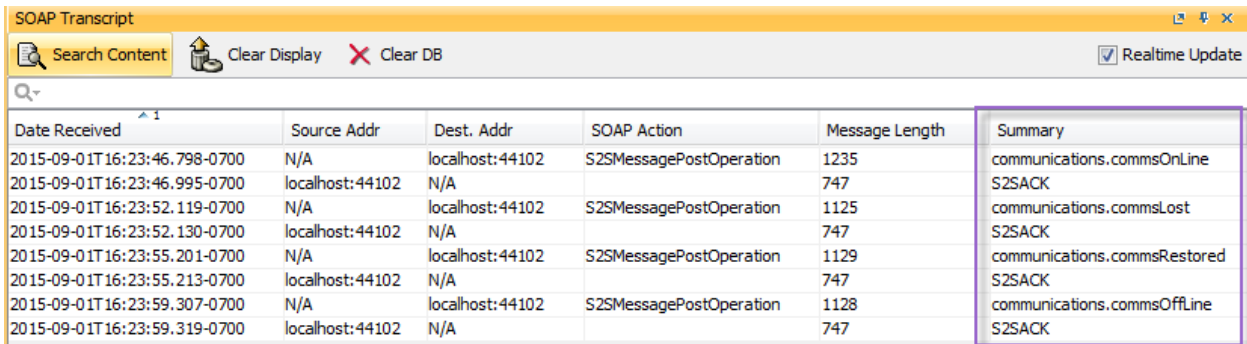

10710 Added a firewall entry to the installer that allows incoming network connections. Note that the firewall entry is not added for installations in different directories.

Release Summary

In this release of the RadBlue S2S Simulator, we made the following improvement:

- Improved processing of the SOAP transcript** – in prior versions of the RSS, the text in many of the SOAP Transcript Summary field was not quite right. A bit of rework in this area now has the tool performing as it should, with the SOAP Transcript Summary field showing the actual S2S command contained in the SOAP package.

Date Received	Source Addr	Dest. Addr	SOAP Action	Message Length	Summary
2015-09-01T16:23:46.798-0700	N/A	localhost:44102	S2SMessagePostOperation	1235	communications.commsOnLine
2015-09-01T16:23:46.995-0700	localhost:44102	N/A		747	S2SACK
2015-09-01T16:23:52.119-0700	N/A	localhost:44102	S2SMessagePostOperation	1125	communications.commsLost
2015-09-01T16:23:52.130-0700	localhost:44102	N/A		747	S2SACK
2015-09-01T16:23:55.201-0700	N/A	localhost:44102	S2SMessagePostOperation	1129	communications.commsRestored
2015-09-01T16:23:55.213-0700	localhost:44102	N/A		747	S2SACK
2015-09-01T16:23:59.307-0700	N/A	localhost:44102	S2SMessagePostOperation	1128	communications.commsOffLine
2015-09-01T16:23:59.319-0700	localhost:44102	N/A		747	S2SACK

We hope this new release works well for you. If you have any ideas for improvement that we may have missed, just let us know at support@radblue.com.

Release Summary

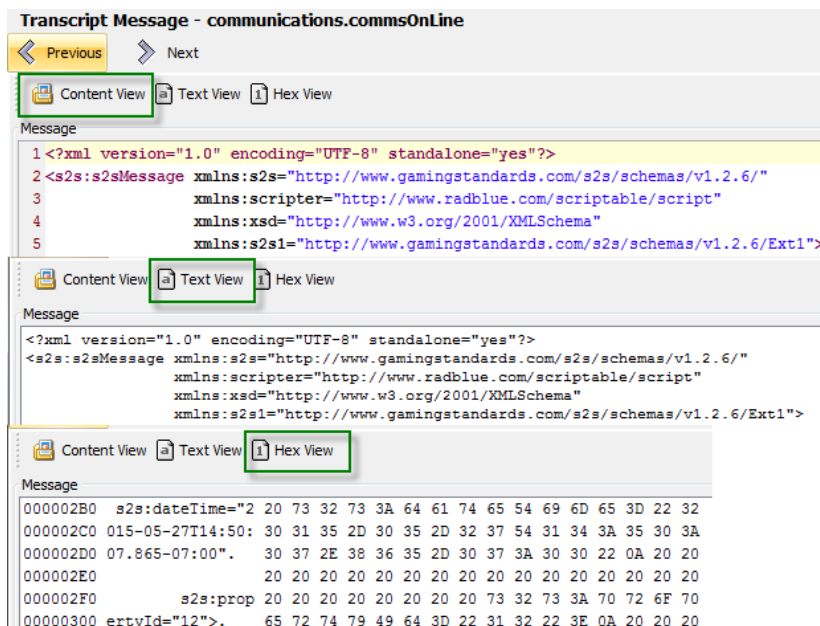

In this release of the RadBlue S2S Simulator, we made the following improvements:

- **Updated our tools to use Java 1.7.0_76** – To keep reasonably close to the leading edge of Java development, we've moved our tools to version 1.7.0_76 of Java (we're not quite ready to make the leap to Java 8). This way, we take advantage of functional and security improvements that are made in the latest versions.
- **Java installer is now bundled with the RadBlue tool installer** – The installer for the requisite version of Java is now included with the RadBlue tool installer. This makes the RadBlue installer a bit larger, but should delight those who are installing on computers that are not connected to the public Internet.
- **Transcript Viewer Content View is now in color** – Color coding has been added to the Transcript Message Viewer in the RSS (it's now the default view). Three different viewing options are provided:

Content View – Color-coded XML for easy reading

Text View – unformatted display, in case you prefer a clean view

Hex View – when you need to know exactly what is in that blank space...

We hope this new release works well for you. If you have any ideas for improvement that we may have missed, just let us know at support@radblue.com.

Release Date: 11 March 2015

Release Summary

For this release of our S2S Simulator (RSS), we discovered that the Next and Previous buttons in the S2S Transcript (used in the RSS) weren't working properly. When you'd press one of these buttons, the highlighted line in the transcript was moving, but the content displayed in the ViewXML window did not change. This has been resolved.

We hope this new release works well for you. If you have any ideas for improvement that we may have missed, just let us know at support@radblue.com.
